

PIXPO Android APP User Guide

The Pixpo mobile app allows you to monitor and view Pixpo IP camera video from your mobile device. It allows you Pan and tilts the camera to different view angle (for PT or PTZ cameras), take a snapshot of camera's image, record camera's video on your phone, play back recorded videos. It also let you set up camera Wi-Fi connection, set up user password, etc.

For Pixpo camera with audio functions, you can remote listen to camera's audio or even talk to your camera remotely.

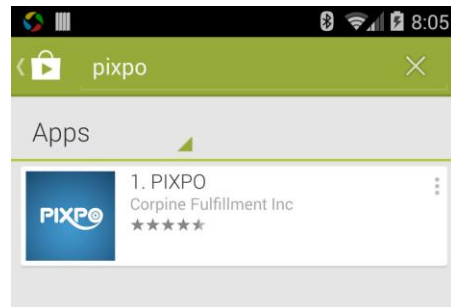

Images on this guide for reference only, it may appear differently based on your device

Getting the App

The PIXPO app is available for Android and IOS platforms, Visit the Google Play Store or the iTunes App Store search Pixpo. Download and install the app. This guide is for version 1 App only.

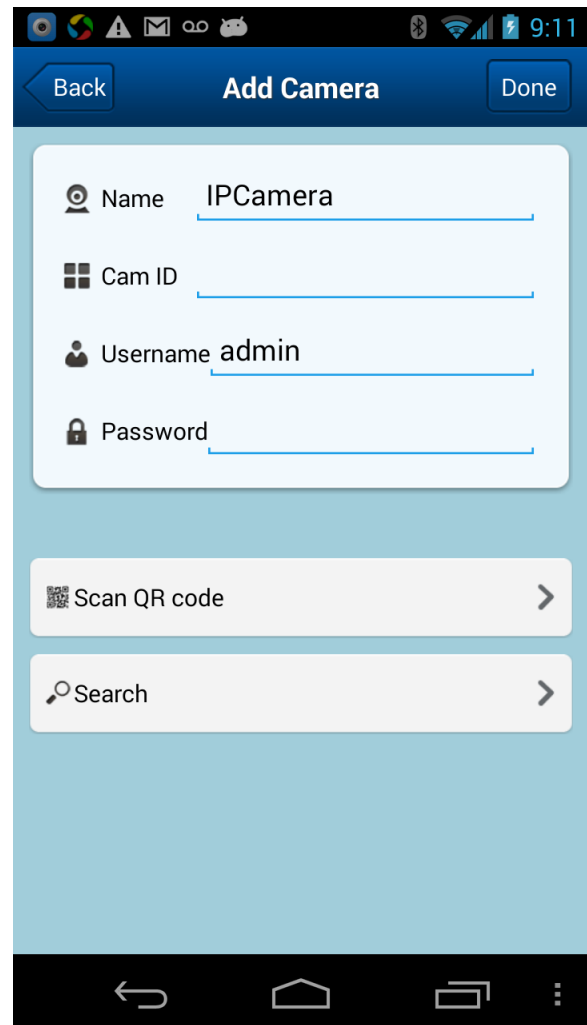

After install, you can launch the Pixpo App by click the Pixpo icon

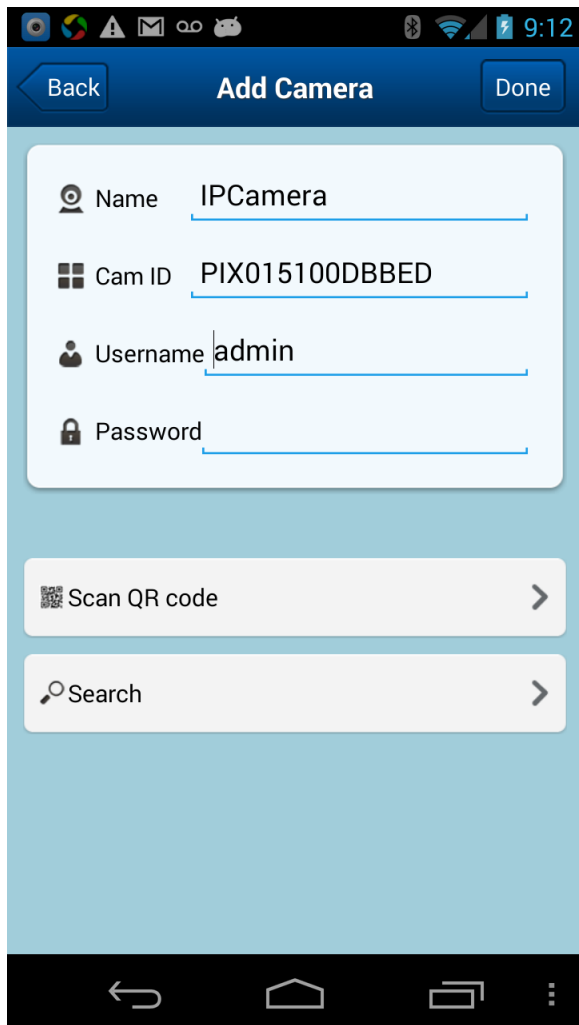

Add a camera

Click Add a camera to add new cameras

Enter your camera ID, or click on Scan QR code to scan your camera ID. For new camera the default user name is admin, the default password is empty, you can update the password in the camera user setting section later, but for initial connect, leave this field empty. Click "Done" to add the camera.

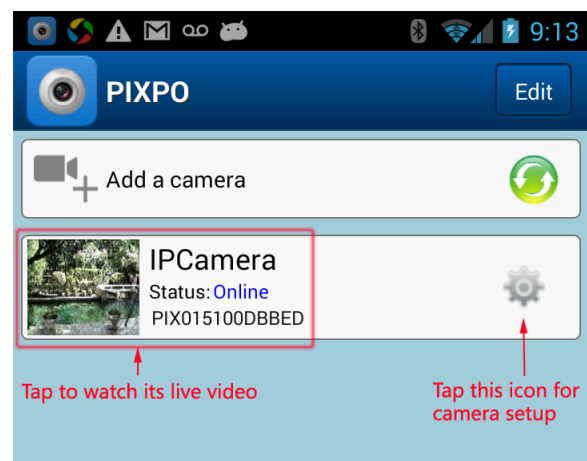

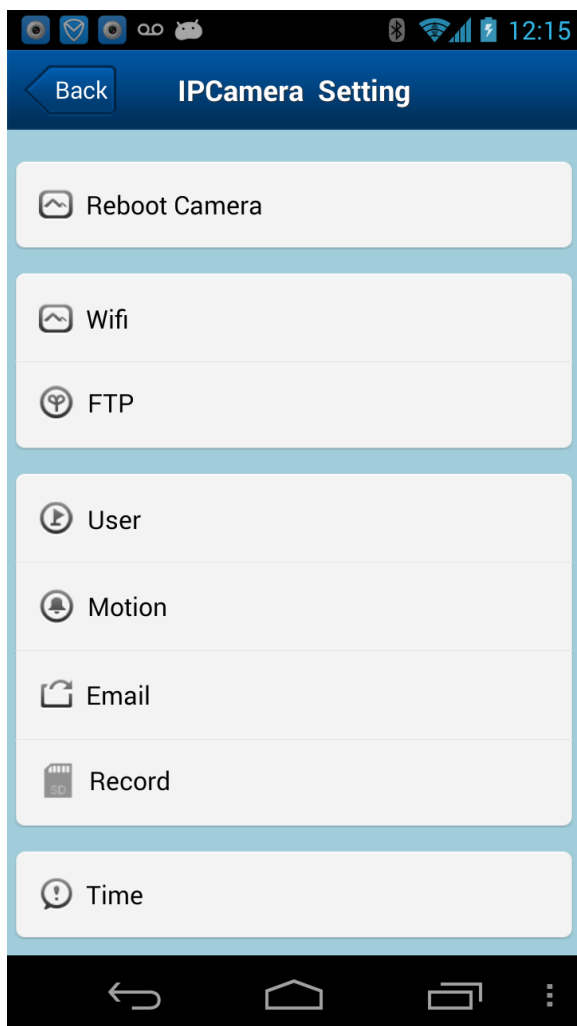

When camera connected to your router, and connect to internet correctly, the camera status will show “Online”, when camera is online, click on the camera thumbnail, you will be able see the camera live image.

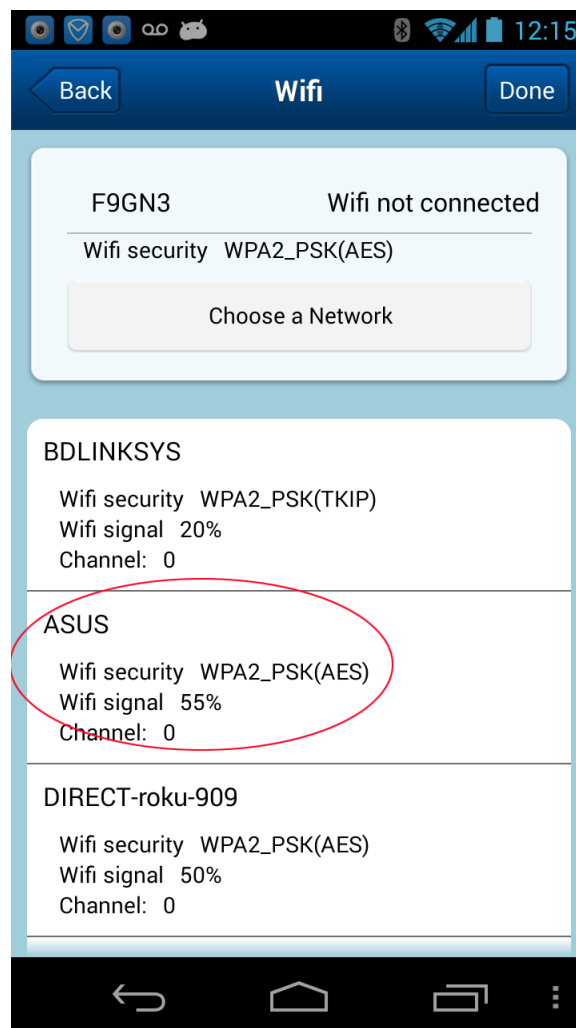

Enter Camera Setup

Click setup icon to setup Wi-Fi access and User password

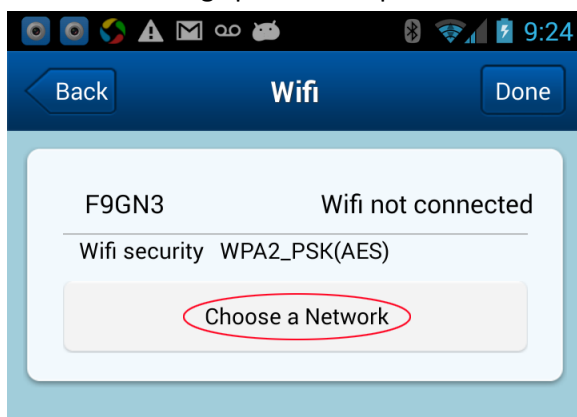

Tap on Choose a Network to search available Wi-Fi network.

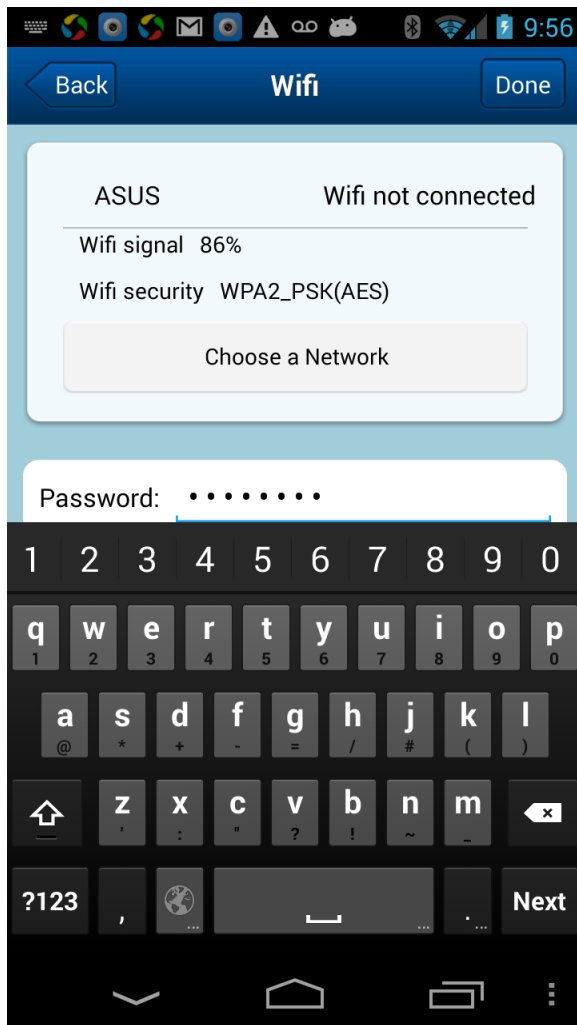

Setup Wi-Fi connection

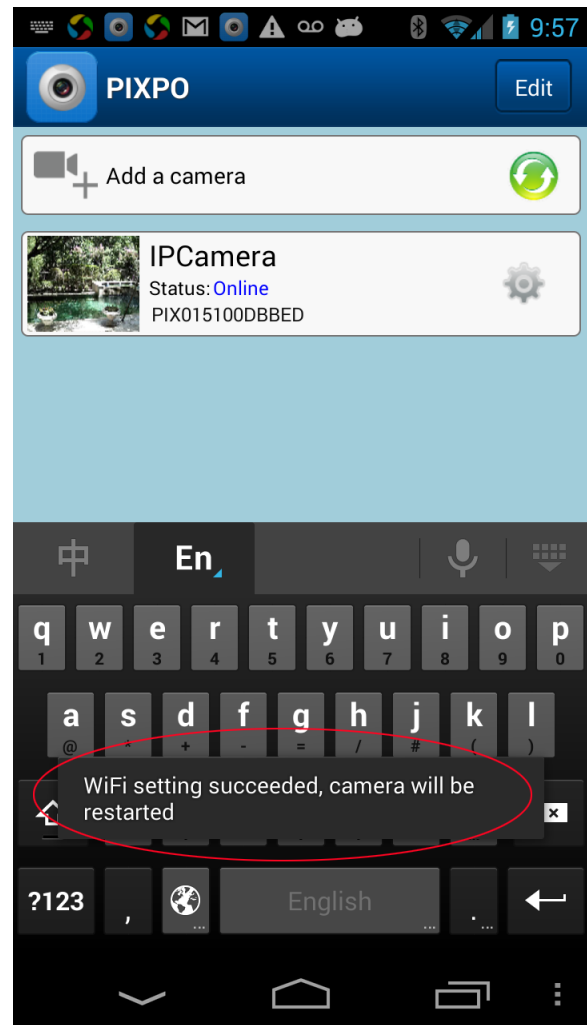

To setup camera Wi-Fi connection to router, tap on Wifi will bring up Wi-Fi setup.

Tap on the network you wish to connect, and then input your router's Wi-Fi password. Click "Done" to finish.

After key in the router's Wi-Fi password, the camera will reboot, give the camera few minutes to restart.

You can unplug the Ethernet cable; try connecting through Wi-Fi

To restart the camera, you can unplug the power cord, wait 20 second, plug back the power, and wait couple minutes for camera restart. The camera will do self-check during restart.

Note: Wired connection is faster and more reliable then Wi-Fi wireless connection, wired connection also reduce your Wi-Fi network load, so use network cable connect the camera to your network when it's possible.

FTP setting

FTP setting for more advanced user only, it require FTP server and network configurations.

Set User password

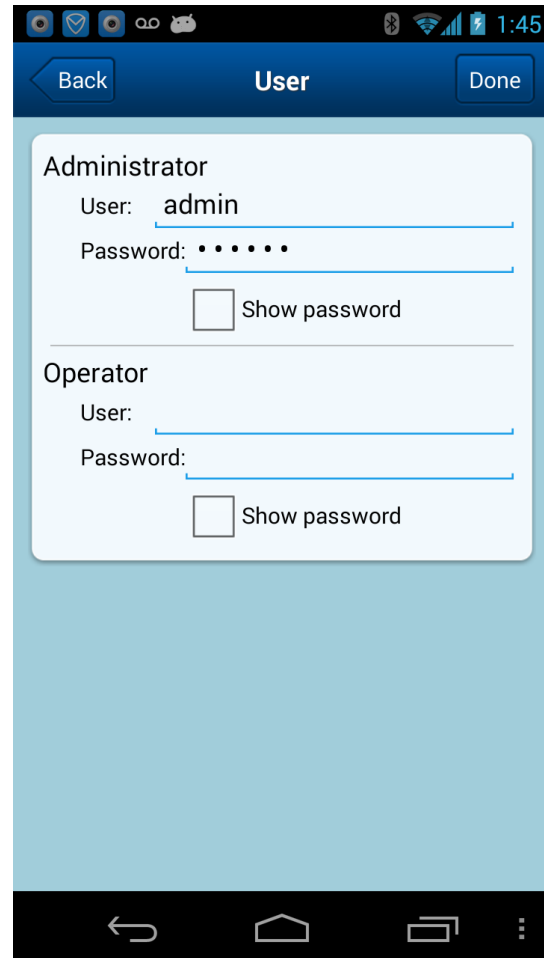

Set User password to secure remote access

On camera setting, tap user to setup user and password.

Key in password for user admin, **writes down the password for future reference**, click Done to save the new password.

You also can change the default Administrator user name, or create a new user name and password for operator.

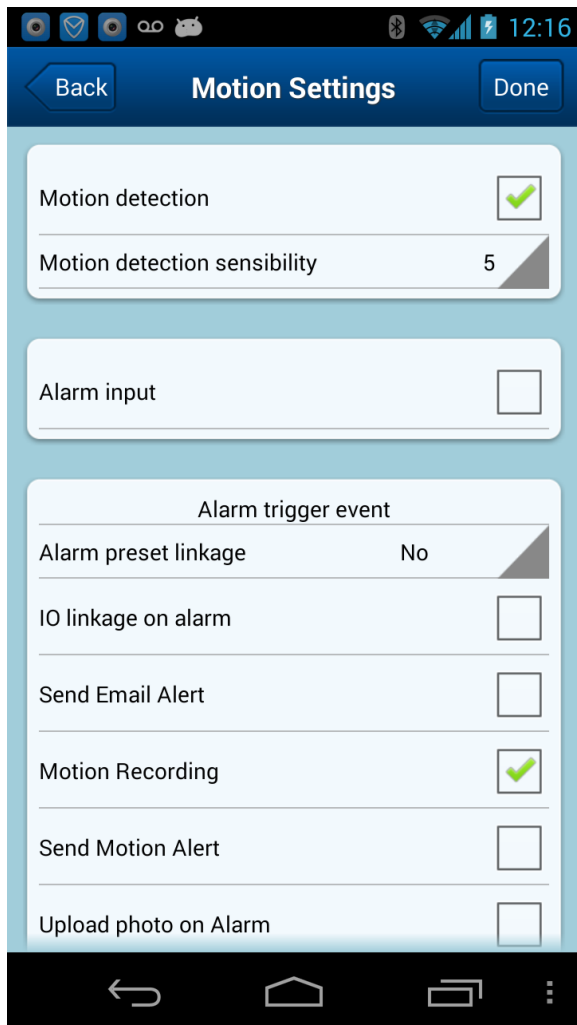

After change password, you'll need update camera login information, put your new login password, and see Edit camera section for details.

Motion settings

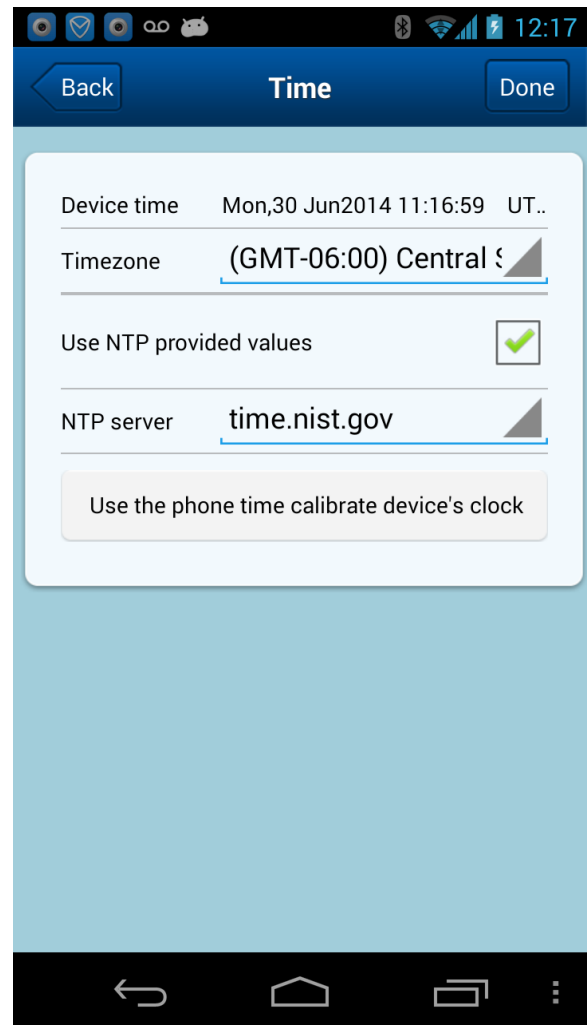

Tap on Motion in camera setting section, will bring Motion Setting page, check or uncheck Motion detection to active or de-active camera image motion detection. Default motion detection sensitivity level is 5, set to lower number for better sensitivity, set to higher number for less sensitivity.

Check Motion Recording if your camera has SD card installed (for certain camera model only).

Set camera time

Click on time to setup the camera time. Select proper time zone. Tap use the phone time calibrate device's clock.

Live view

When the App opens, all relevant cameras are displayed in a list

Click one of the online camera, will bring you view a camera in full screen mode; you can adjust the image in several ways.

If your camera has Pan and Tilt function, Tap on the blue arrows to Pan or Tilt the camera remotely, you also can move finger across the screen to control the PT camera. Due to

network delays, give camera little time to response.

Tap (brief touch on the screen) on the phone screen will bring camera control functions. Tap the screen again the buttons will hide.

In the upper left corner, tap this list of value icon will bring more functions.

Flip horizontal

Flip vertical

Brightness control

Contrast control

Reset video to default

Note that not every camera has every feature, and some features only work in certain camera model.
